This document is a brief summary of the Institute of Medicine report entitled When Children Die: Improving Palliative and End-of-Life Care for Children. Better care is possible now, but current methods of organizing and financing palliative, end-of-life, and bereavement care complicate the provision and coordination of services to help children and families and sometimes require families to choose between curative or life-prolonging care and palliative services, in particular, hospice care. Inadequate data and scientific knowledge impede efforts to deliver effective care, educate professionals to provide such care, and design supportive public policies. Integrating effective palliative care from the time a child's life-threatening medical problem is diagnosed will improve care for children who survive as well as children who die and will help the families of all these children. The report recognizes that while much can be done now to support children and families, much more needs to be learned. The analysis and recommendations reflect current knowledge and judgments, but new research and insights will undoubtedly suggest modifications and shifts in emphasis in future years.

"Over the last quarter of a century, the fields of medical ethics and of legal issues related to medical practice have rapidly developed for a number of reasons. Firstly, the provision of healthcare nowadays is based on a complicated partnership between healthcare providers, patients, administrators and organizations responsible for providing finance; this complicated partnership frequently results in clashes of views, opinions, and priorities, which have a major ethical and legal dimension. Secondly, a major event of the 21st century is the development of multicultural societies; healthcare-related decisions thus have to be made on the background of so many different ethnicities, religions, cultures and languages, resulting in a great
spectrum of ethical and legal implications. Thirdly, in the modern world, people are more mobile and can easily and cost-effectively seek treatment outside of their country of origin or residence, which raises many ethical and legal issues. Lastly, the development of new medical specialties, modern and advanced treatments for very challenging patients, and the introduction of new technologies in medical practice have dramatically broadened the spectrum of ethical and legal issues related to medical practice. This book will therefore aim to cover in detail general principles and specific issues related to the ethical and legal dimensions of modern surgical practice.

This report outlines essential themes of the access versus confidentiality debate that emerged during the workshop. Among these themes are the tradeoffs and tensions between the needs of researchers and other data users on the one hand and confidentiality requirements on the other; the relative advantages and costs of data perturbation techniques (applied to facilitate public release) versus restricted access as tools for improving security; and the need to quantify disclosure risks--both absolute and relative--created by researchers and research data, as well as by other data users and other types of data.

The goal of this book is to help the reader gain knowledge on ethical and legal issues in the field of student affairs and develop competency to follow the profession's principles and standards of conduct. The significance of the book is due to its focus on the practical value of ethics and legal issues and its aim to address the knowledge, skills, and dispositions required of student affairs educators to develop and maintain integrity in their life and work as described by the ACPA/NASPA. The new field of toxicogenomics presents a potentially powerful set of tools to better understand the health effects of exposures to toxicants in the environment. At the request of the National Institute of Environmental Health Sciences, the National Research Council assembled a committee to identify the benefits of toxicogenomics, the challenges to achieving them, and potential approaches to overcoming such challenges. The report concludes that realizing the potential of toxicogenomics to improve public health decisions will require a concerted effort to generate data, make use of existing data, and study data in new ways--an effort requiring funding, interagency coordination, and data management strategies.
